Children's Activities (3 to 5 years)

by Joan Faragher.

This book was helpful in explaining why children, at different ages from 3 to 5 liked to play at different activities. A range of development stages of children was well explained. The book told me the reasons why they are able to do all these activities at different ages. The book was set out in an easy to understand style, helpful because English is my second language. There were a lot of pictures and they made clear how children play at activities. Even though this book is old (1985), the information is high quality and still relevant in applying it to practice in 2011.
